

Poisonous Wild Plants

white berries and have red stems. Poison Sumac can be found growing as a small shrub up to a small tree 10 to 15 feet tall. Poison Sumac typically grows in wet, swampy areas.

Poison Ivy can be identified by three pointed leaflets on each stem. The leaflets may have smooth or toothed edges. Poison Ivy typically grows as a climbing vine. It has green leaves that will turn to a bright red in autumn. **Remember the saying; one, two, three, don't touch me!**

Similar to Poison Ivy, Poison Oak can be identified by three shiny leaves on each stem. The leaves are lobed and resemble the leaves of an Oak tree. Poison Oak grows as a shrub and is more common throughout the Western US. **Again, remember; one, two, three, don't touch me!**
